
Mehrer Drywall Inc. of Seattle, Finds Kinetics IsoMax Clips Faster & Easier To Install

**Faster & Easier
To Install!**

Mehrer Drywall had installed many of the competitor's clips on a project in the Seattle area before switching to Kinetics Noise Control's IsoMax clips thanks to the efforts of Sales Representative Dave Forrest of Seattle Sound

and Vibration. Mehrer has learned over their 40 plus years in business that selecting the best tools and materials can greatly impact their productivity on a project. They were so pleased with the labor savings using the IsoMax clips that Eric Mehre sent the following letter to his Kinetics Representative.

July 28, 2008

Dave,

*I just wanted to let you know how happy the guys were that we are using your **IsoMax Clips** on our project. We used some of the competitor's clips for some other stuff, and the difference is huge. **IsoMax Clips** go on so much faster than the others because your layout does not have to be perfect. We just slide the clips onto the hat channel, and slap it up onto the wall.*

The others you have to get every clip in a perfect line then snap the hat channel on. If one is a little bit off you have to start over. Also they have a screw on the top and the bottom holding it securely to the wall. The others tend to rock a bit on the stud after install, when you have to hold the GWB off of the ground, it then will slide down the wall a little bit, giving you a potential cracking problem. Last they are cheaper...what more can I say.

"Faster & Easier To Work With!"

--- Eric Mehre
