

LEED Data* for High Impact HardSide Panels

Since 2009 Kinetics has been participating in the LEED initiatives of promoting sustainable, safer and regenerative materials, and reducing global climate change.

Additionally, the use of our products promotes human health and quality of life via their acoustic control benefits for: Speech Privacy, Speech Intelligibility, Sound Transmission, Background Noise and Sound Quality.

High Impact Panels can help earn LEED credits for Homes, Building Design & Construction (BD&C) and Interior Design Construction (ID&C) for Schools, Retail, Hospitality, Healthcare, etc. and LEED Canada.

- High Impact is used to acoustically control noise, improve privacy, articulation and comfort to the building occupants, where durability from physical impacts are needed.

MR Recycled Content

The fiberglass core contains 0% pre and 53% post-consumer recycled content.

The standard fabric wrap contains 0% pre and 100% post-consumer recycled content.

Chemical edge hardener contains 0% recycled content.

The product is 100% recyclable.

MR Regional Materials

Extraction location for the fiberglass core is 65% Defiance, OH 43512. Other materials are multiple.

Manufactured in Dublin, OH 43017.

Purchased in Dublin, OH 43017.

MR Rapidly Renewable Materials

This product does not contain rapidly renewable material.

MR Certified Wood

This product does not contain wood.

IEQ Low Emitting Materials- Adhesives and Sealants

This product's TVOC content has not been tested, but is estimated to be LEED compliant.

IEQ Acoustic Performance

May qualify for credits regarding acoustic design and performance: Background Noise (dBA), Sound Isolation (STC), Reverberation Time (T60), Speech Privacy (SPC), Acoustical Finishes (NRC) and/or Site External Noise ((Ldn, dBA & L01, dBA)
