

# INSTALLATION INSTRUCTIONS

## MODEL SFB

1. Place frame base in its operating location
2. Place a shim under the frame next to each bracket. Check the submittal drawing for correct floor clearance, to size shim.
3. Equipment can now be installed.
4. When equipment is mounted and ready for operation, the isolators can be adjusted in sequence as follows: turn leveling bolt two or three turns counter-clockwise on each isolator until the frame base just comes free from the shim. See isolator installation sheet for specific details.
5. The blocks may be removed.
