

KSCH

Low Profile Deck-Suspended Ceiling Hanger

Patent No. 7,028,432 B2

Evolved noise control isolated ceiling design.

Consider that MEP and other equipment may need to be suspended, different deck elevations often have to be incorporated, and sometimes noise control solutions need to be shimmed into tight spaces. KSCH offers unprecedented flexibility for isolated ceiling design. A single hanger design can be adapted to any isolated ceiling project.

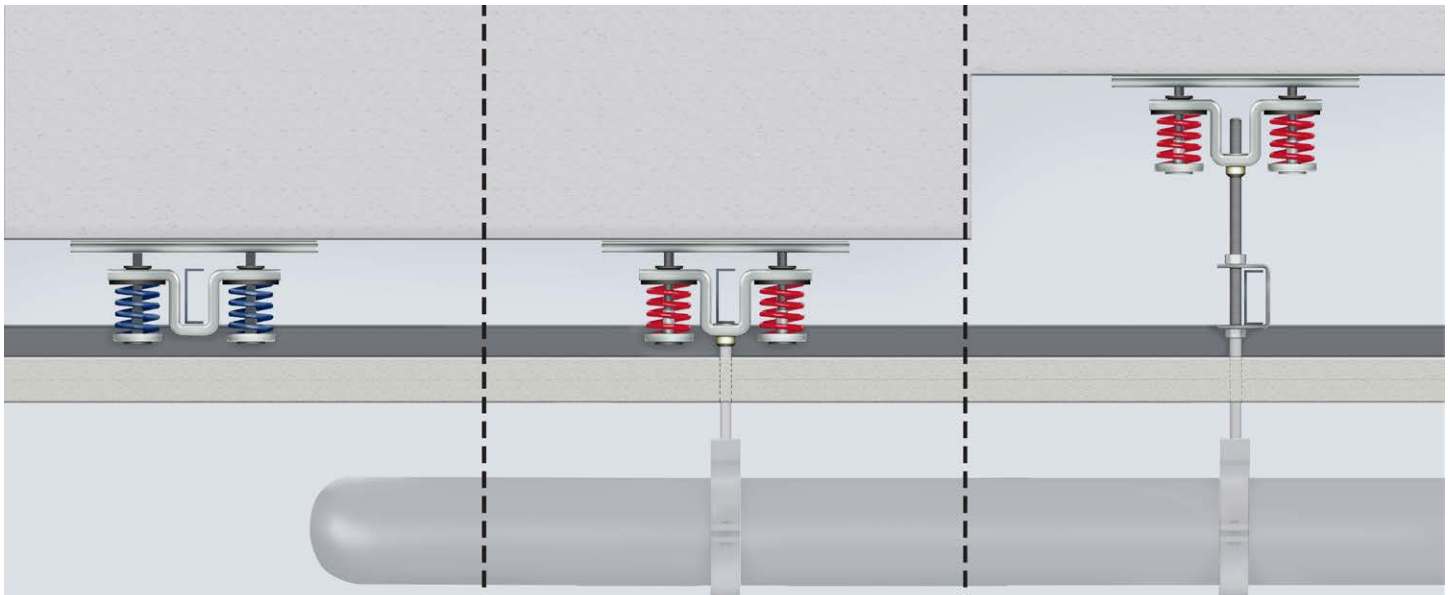

- 1" deflection spring performance in a narrow 3 1/2" airspace.
- Hanger configurations easily adapt to different deck heights.
- Attach directly to deck or slide into Unistrut® for easy installation

1-800-959-1229

Standard Configuration:
Simple ceiling with fixed airspace

Add threaded rod:
Fixed airspace with extended rod for equipment and other attachments

Add APB bracket:
Specifiable airspace with or without extended rod below ceiling
*Airpace Performance Bracket
