

KINETICS® ScatterBox DIFFUSER PANELS

Control harsh, specular reflections by randomly dispersing sound energy throughout the listening space. Expand the sound field and improve sound clarity for a more lifelike listening experience.

ScatterBox combines excellent hemispherical acoustical diffusion with a solid wood construction. Based on a quasi-random series that provides superior performance without visual patterning, the ScatterBox is ideal for studio control rooms, auditoriums, performance venues, listening rooms, home theaters, and worship spaces. Strong and lightweight, these beautiful 24" by 24" (nominal) wood panels install easily and can be used on walls or ceilings for enhanced sound quality.
