Kinetics Noise Control Announces Launch of KSR 2.0 Vibration Isolation Rail

A roof curb noise and vibration control system that goes beyond internal isolation

Dublin, OH, January 21, 2021 | Kinetics Noise Control Inc. (Kinetics) is proud to announce the launch of the new and improved KSR 2.0 Vibration Isolation Rail. This new isolation rail comes in two options: fully or partially assembled. It's engineered to isolate packaged rooftop equipment from the roof structure and goes well beyond internal isolation by reducing casing-radiated vibration caused by turbulent air flow as well as compressor and fan vibration.

The KSR 2.0 is available in two forms: fully or partially assembled. In either form, installation is extremely easy with the supplied factory assembled parts. For the partially assembled option, Kinetics provides TEK screws, Caulk, rubber corners caps, and flashing tape. Maximum shipping dimensions for both options is 8' x 20'.

"Utilizing customer feedback of the old KSR, we wanted to redesign the Kinetics Spring Rail to improve the end-user experience," says Lee Chiddention, Kinetics HVAC Market Manager. "The main objective was to limit the field labor required to complete the installation while maintaining the maximum amount of isolation possible."

In comparison to the previous KSR Vibration Isolation Rail, this new version features an improved design with fewer components, a pre-installed weather strip, integrated seismic and wind restraints that do not require additional labor to install, and pre-compressed springs so the rail will be installed at its operational height. It's also engineered to meet the latest building code requirements.

Visit the Kinetics website to uncover what all KSR 2.0 has to offer: kinetics.com/ksr.

About Kinetics Noise Control

Established in 1958 as industrial consultants focused on controlling sound and vibration, Kinetics now produces the industry's largest selection of products and solutions that control airborne noise, isolate

structure-borne vibration, enhance room acoustics, create quiet spaces, and restrain non-structural building systems.

About Catalyst Acoustics Group

Catalyst Acoustics Group is the parent company of an elite group of acoustic, seismic, vibration and noise control companies that together, offer the broadest portfolio of noise control solutions in the market today. The independent brands, channels to market, products and services offered by each business remain unique, while leveraging the scale, deep functional expertise, broad channel reach and significant financial resources.
