

# Gotham

## 1" Deflection Spring Hanger

Does the local building code stipulate no wire-tie ceilings? Approved for construction in New York City, Kinetics Gotham hanger is an ideal choice for suspending materials for a noise control ceiling wherever wire-tie suspension is not allowed.

Or maybe you want a key feature of our popular Muta hanger, a one-inch rated deflection spring in-line with a rubber element, but prefer installing CRC and drywall furring channel for the grid system. The channel clip and leveling bolt assembly make installation and leveling of the CRC grid system fast and simple. And after the weight of the noise control ceiling compresses the spring, an ample airspace is created between the concrete deck and the isolated ceiling.

### Features

- Channel clip assembly carries cold-rolled-channel (CRC) grid system
- Built-in ability for leveling the ceiling's framing grid
- Easily attached to the deck using a single fastener
- Capacities up to 210 pounds
- A level ceiling can be designed easily with Gotham's ten (10) different spring capacities
