

# IPRB

## Masonry and Stud Wall Isolation Bracket

Resilient support the head of a stud wall partition or concrete masonry (CMU) wall.

Use IPRB for walls to be completely decoupled from the deck. In stud walls use IPRB-48 continuously if the top of partition is exposed, or stagger IPRB-6 if the head of the partition is above a gypsum board ceiling. IPRB-48 should be used for CMU applications.

- Used on both sides of an isolated partition.
- Available in continuous strips (IPRP-48) or segmented (IPRB-6)
- Can be reversed (IPRB-R) if partition is close to non-isolated structure.
