

KSCH

Low Profile Deck-Suspended Ceiling Hanger

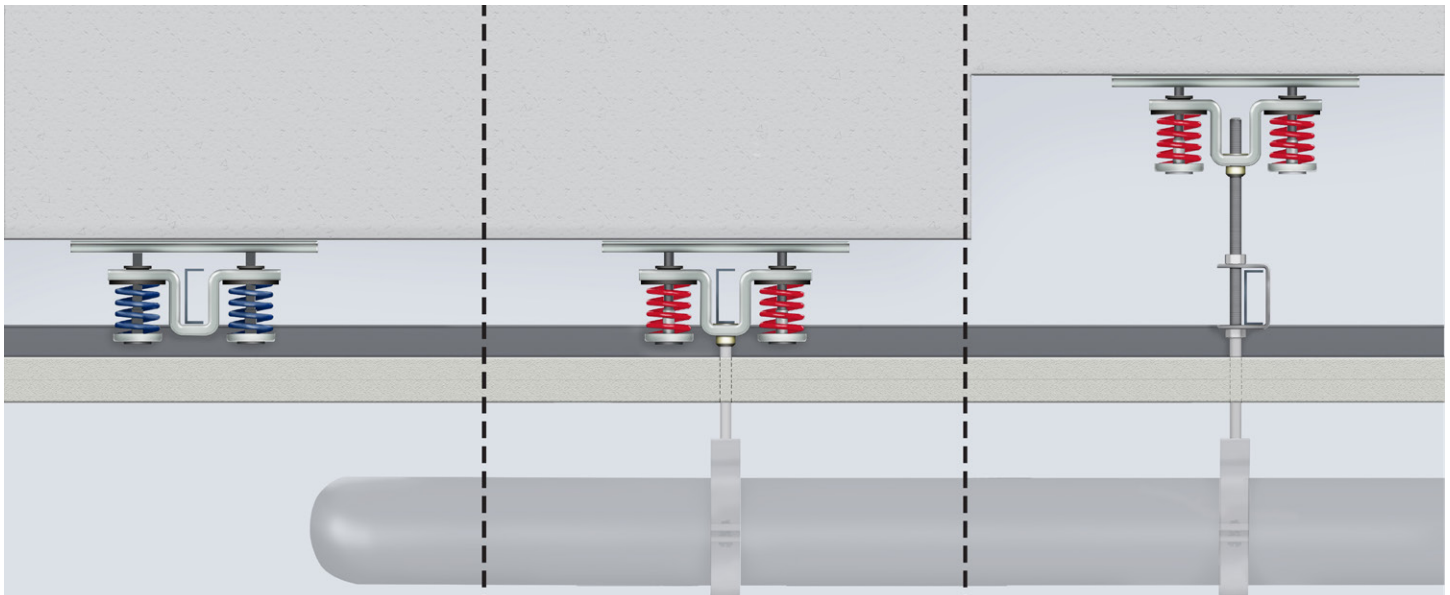

Patent No. 7,028,432 B2

Evolved noise control isolated ceiling design.

KSCH remains the most versatile spring hanger available for ceiling isolation applications. Consider this scenario: A low-profile ceiling is required only for a portion of the room – no need to use another type of spring hanger, KSCH is readily adaptable with a 3/8-inch leveling bolt and channel clip assembly. Easily suspend a ceiling at a lower elevation, create soffits, or suspend an elegant tray ceiling with indirect lighting. One ceiling hanger, easily adaptable for your particular design requirements.

Standard Configuration:
 Simple ceiling with fixed airspace

Add threaded rod:
 Fixed airspace with extended rod for equipment and other attachments

Add APB bracket:
 Specifiable airspace with or without extended rod below ceiling
 *Airpace Performance Bracket
