

Stretch *TRAK*TM Blocking Information – Penetrations

Prior to the arrival of Stretch *TRAK* installers, penetrations in walls and ceilings should have wood blocking installed around each opening. Typical penetrations include *electrical boxes, light switches, can lights, light sconces, HVAC registers, sprinkler heads, and ceiling fans*. Outlet blocking allows installers to cut openings in the acoustical fabric and fasten it around the perimeter of the opening.

Typical electrical outlet blocking and fabric finish

Typical Blocking
Dimensions

Width: 2" every side

Depth: Dependent on acoustical treatments

Treatment Depth	Blocking Depth
1"	7/8"
2"	1-7/8"
2-1/8"	2"
3"	2-7/8"
3-1/8"	3"
4"	3-7/8"
4-1/8"	4"

Can Light

HVAC Register
